

ABSTRACT

A step portion (12) is formed on a table body (11) to be attached to a motor (20), and an ultraviolet curable adhesive as a resin (13) is applied to a mount-place forming position of the table body (11) including the step portion (12), and cured. The table body (11) is attached to the motor (20), and the surface of the resin (13) is cut while rotating a rotating shaft (21) of the motor (20). At this time, the step portion (12) prevents the peeling of the resin (13) against the force of moving the resin (13).
